STARTER TIER — $299

Part 1: Starter Tier — Business Process Guide

The Starter tier provides core medical transcription operations for small clinics, solo providers, and individual transcriptionist groups. This guide covers the business workflows, operational procedures, and daily processes for the 12 included sections.

1.1 Included Sections (12)

#	SECTION	BUSINESS PURPOSE
1	Overview	Daily KPI dashboard — total jobs, delivered, SLA compliance, quality score
2	Jobs (Kanban)	Drag-and-drop workflow board — 7 columns (Intake → Delivered)
3	My Queue	Personal job queue — assigned jobs for the current user
4	Upload Dictation	Audio file upload + metadata capture (patient ref, provider, priority)
5	Documents	Delivered/approved documents — view + download
6	Clarifications	Query workflow for unclear dictation or missing metadata
7	Quality	QA findings, error types, rework rate tracking
8	Templates	Document template library (SOAP, H&P, Discharge, etc.)
9	Analytics	Volume trends, specialty distribution, operational charts
10	Team	User management — members, roles, shifts, skills
11	Billing	Basic subscription + usage view (no Stripe integration)
12	Settings	Organization profile, timezone, feature flags

1.2 Daily Operational Workflow

1. **Morning (09:00):** Check the Overview dashboard for overnight job volume, SLA risk flags, and escalations. Review the Kanban board for jobs in "AI Draft Ready" or "Awaiting QA" status.
2. **Mid-morning (10:00):** Upload new dictations via the Upload Dictation section. Capture patient ref, provider, facility, priority, and turnaround time. The system auto-creates a job number + calculates the SLA deadline.
3. **Afternoon (13:00):** Process jobs in My Queue — open the Job Detail Drawer, review the transcript + structured document, make corrections, submit to QA or provider review.
4. **Late afternoon (16:00):** Review QA findings in the Quality section. Address rework items. Check the Clarifications section for any open queries from providers.
5. **End of day (17:00):** Check the Analytics dashboard for daily volume + quality trends. Ensure all STAT jobs are delivered. Review the billing usage meter.

1.3 Roles & Responsibilities

ROLE	KEY RESPONSIBILITIES	SECTIONS ACCESSIBLE
Tenant Owner	Full platform management, billing, settings	All 12
Provider	Upload dictation, review/approve documents	9 of 12
Transcriptionist	Process assigned jobs, flag unclear audio	7 of 12
Medical Editor	Edit drafts, submit to QA	8 of 12
QA Analyst	QA review, approve/reject, return for rework	8 of 12
Billing User	View usage + invoices	3 of 12

1.4 Key Business Rules

- **SLA calculation:** Routine = 24h, Urgent = 12h, STAT = 4h (from submission to delivery)
- **QA threshold:** Quality score ≥ 70 to pass QA. Below 70 → rework
- **Priority escalation:** STAT jobs at 90% SLA → auto-escalate to Operations Manager
- **Clarification SLA pause:** When a clarification is open, the SLA timer pauses until resolved

- **Document lock:** Once provider e-signs, the document version is immutable

STARTER TIER — $299

Part 2: Starter Tier — Reference Guide

Technical reference for the Starter tier — API endpoints, configuration, RBAC permissions, and troubleshooting.

2.1 API Endpoints (Starter Tier)

METHOD	ENDPOINT	DESCRIPTION
GET	`/api/medflow/jobs`	List all transcription jobs with relations
POST	`/api/medflow/jobs`	Create a new job from upload form
POST	`/api/medflow/job-status`	Advance job workflow status
GET	`/api/medflow/dashboard`	Aggregate metrics for Overview
GET	`/api/medflow/options`	Dropdown options (providers, facilities, etc.)
POST	`/api/medflow/upload`	Upload dictation audio + create job
GET	`/api/medflow/team`	Team members + skills + shifts
GET	`/api/medflow/templates`	Document templates library
GET	`/api/medflow/clarifications`	Clarification requests + messages
GET	`/api/medflow/billing`	Subscription + usage records
GET	`/api/medflow/notifications`	Notification list

2.2 Configuration

CONFIG FILE	PURPOSE	KEY SETTINGS
`.env`	Environment variables	DATABASE_URL, AUTH_SECRET
`next.config.ts`	Next.js configuration	output: "standalone", typescript.ignoreBuildErrors
`prisma/schema.prisma`	Database schema	24+ models, SQLite provider
`src/lib/medflow/constants.ts`	Nav items, kanban columns, plans	NAV_ITEMS (12 sections), KANBAN_COLUMNS (7)
`src/lib/medflow/rbac.ts`	Role-based access control	6 roles, SECTION_PERMISSIONS
`src/app/globals.css`	Theme + scrollbar styles	--mf-primary: #0B5345, --mf-secondary: #1ABC9C

2.3 RBAC Permissions (Starter — 6 roles)

ROLE	SECTIONS	ACTIONS
Tenant Owner	All 12	All (upload, assign, approve, deliver, manage users)
Provider	Overview, Jobs, Queue, Upload, Documents, Clarifications, Quality, Analytics	Upload, approve, e-sign
Transcriptionist	Overview, Jobs, Queue, Documents, Clarifications	Advance workflow, request clarification
Medical Editor	+ Quality	+ QA review
QA Analyst	+ Analytics	+ QA reject/rework
Billing User	Overview, Billing, Analytics	View billing, export data

2.4 Troubleshooting

ISSUE	CAUSE	SOLUTION
"Failed to load" on jobs	Database not seeded	Run `bun run prisma/seed.ts`
White page on startup	Dependencies not installed	Run `bun install`
Kanban sidebar disappears	Flexbox overflow	Fixed via `min-w-0` on main container

ISSUE	CAUSE	SOLUTION
502 on AI Agents	FastAPI not running	Starter uses static fallback — sections show demo data without FastAPI

STARTER TIER — $299

Part 3: Starter Tier — Infrastructure & Installation Guide

Setup guide for Linux, Windows, and macOS. The Starter tier uses SQLite (no database server needed) and does NOT require the FastAPI backend (sections use static fallback data).

3.1 Prerequisites

TOOL	VERSION	LINUX	WINDOWS	MACOS
Bun (or Node.js)	Bun 1.0+ / Node 20+	`curl -fsSL bun.sh/install | bash`	`irm bun.sh/install.ps1 | iex`	`brew install bun`
Python (optional)	3.12+	`sudo apt install python3`	Download from python.org	`brew install python`
Git (optional)	2.40+	`sudo apt install git`	Download from git-scm.com	`brew install git`

Note: Python + Git are optional for Starter. The app works with just Bun/Node.js + SQLite.

3.2 Linux Installation (Ubuntu/Debian)

1. Install Bun:

```
curl -fsSL https://bun.sh/install | bash
source ~/.bashrc
```

2. Extract the ZIP + navigate:

```
unzip medflow-starter-v1.0.0.zip -d medflow
cd medflow
```

3. Install dependencies + setup database:

```
bun install
cp .env.example .env
bun run db:push
bun run prisma/seed.ts
```

4. Start the app:

```
bun run dev
# Open http://localhost:3000
```

3.3 Windows Installation

1. Install Bun (PowerShell as Administrator):

```
irm bun.sh/install.ps1 | iex
```

Or install Node.js 20+ from https://nodejs.org (use `npm` instead of `bun`)

2. Extract the ZIP: Right-click → "Extract All" → choose folder (e.g., `C:\Projects\medflow`)

3. Open PowerShell + setup:

```
cd C:\Projects\medflow
bun install
copy .env.example .env
bun run db:push
bun run prisma/seed.ts
```

4. Start:

```
bun run dev
# Open http://localhost:3000
```

3.4 macOS Installation

1. Install Homebrew + Bun:

```
/bin/bash -c "$(curl -fsSL https://raw.githubusercontent.com/Homebrew/install/HEAD/install.sh)"
brew install bun
```

2. Extract + setup:

```
unzip medflow-starter-v1.0.0.zip -d medflow
cd medflow
bun install
cp .env.example .env
bun run db:push
bun run prisma/seed.ts
```

3. Start:

```
bun run dev
```

3.5 Environment Variables (Starter)

VARIABLE	REQUIRED?	DEFAULT/EXAMPLE
DATABASE_URL	YES	`file:./db/custom.db` (SQLite)
AUTH_SECRET	YES	Random 32+ char string
NEXTAUTH_URL	YES	`http://localhost:3000`
FASTAPI_URL	OPTIONAL	`http://localhost:8000`
OPENAI_API_KEY	OPTIONAL	For real AI (Starter uses static fallback)
STRIPE_SECRET_KEY	OPTIONAL	For real billing (Starter shows mock data)

Starter Tier Limitations

No AI agents (static fallback data only) · No voice chatbot · No live dictation · No compliance tools · No auto-pilot · No autonomous SOC · 12 of 29 sections · 6 of 12 roles · Basic billing view only

PROFESSIONAL TIER — $599

Part 4: Professional Tier — Business Process Guide

The Professional tier adds AI agents, operational intelligence, compliance, and client-facing features. 19 sections + full FastAPI backend with 10 AI agents + entity extraction + hallucination detection + voice chatbot + live dictation.

4.1 Additional Sections (vs Starter — 7 new)

#	NEW SECTION	BUSINESS PURPOSE
13	AI Agents	10 AI agents (transcription, QA, routing, delivery, etc.) — run agents, view status
14	AI Ops Copilot	Manager-facing predictive dashboard — SLA breach predictions, rework alerts, staffing recommendations
15	Workflow & Routing	Visual rule builder + confidence-calibrated routing + self-optimizing routing
16	Workforce Mgmt	Leaderboard, weekly shift grid, skills matrix, burnout-risk detection
17	Continuous Compliance	16 live controls + 1-click audit pack + auto-remediation
18	Client Portal	White-labeled portal for healthcare clients — branding, users, stats
19	Mobile App	iOS/Android provider app config + phone mockup preview

4.2 AI Agent Workflow (Professional)

The Professional tier includes the full FastAPI backend with 10 AI agents. The pipeline runs semi-autonomously:

1. **Intake Validation Agent** — validates metadata, checksum, malware scan. Auto-creates job + SLA deadline.
2. **Transcription Agent** (whisper-large-v3) — speech-to-text with confidence scoring. Flags low-confidence regions.
3. **Structuring Agent** (glm-4-longcontext) — converts transcript to structured document (SOAP sections, entity extraction).
4. **QA Agent** — detects medication conflicts, laterality errors, negation issues, hallucination flags.
5. **Allocation Agent** — routes to best editor (specialty + shift + QA history). Notifies assigned user.
6. **SLA / Delivery / Billing / Security / Reporting Agents** — monitor throughout the lifecycle.

4.3 Entity Extraction + Hallucination Detection

From the Job Detail Drawer, editors can:

- **Extract Entities** — AI auto-suggests SNOMED CT, ICD-10, CPT, RxNorm codes from the transcript. Editor reviews + approves. Never auto-applied.
- **Detect Hallucinations** — AI scans for medication conflicts (dose discrepancies), laterality conflicts (left/right), negation conflicts (denies vs reports), numeric inconsistencies. Flags with severity + recommendation.

4.4 Voice Chatbot

The Professional tier includes a floating Voice Chatbot (bottom-right) with:

- **LLM chat** — ask questions about the workflow, get AI-powered answers
- **ASR (speech-to-text)** — speak into the mic, the chatbot transcribes + responds
- **TTS (text-to-speech)** — AI responses are spoken aloud
- **Autonomous agent-run** — "Run Transcription Agent" → the chatbot triggers the FastAPI agent + reports the result
- **Quick-action chips** — one-click buttons to run specific agents

4.5 Live Dictation

Real-time streaming transcription — provider speaks into the mic, the transcript appears word-by-word with confidence coloring (green ≥0.95, amber 0.80-0.95, red <0.80). Submit as a new job when done.

4.6 Compliance Management

The Continuous Compliance section shows 16 live controls (HIPAA, GDPR, ISO 27001, ISO 13485, HITRUST, SOC 2) with real-time status. The 1-click audit pack generator creates a downloadable evidence bundle. Auto-remediation auto-fixes control failures.

4.7 Daily Operational Workflow (Professional)

In addition to the Starter daily workflow, Professional tier managers should:

- **Morning:** Check the AI Ops Copilot for SLA breach predictions + staffing recommendations
- **Weekly:** Review the Self-Optimizing Routing panel for auto-adjustments + before/after metrics

- **Monthly:** Generate audit packs from Continuous Compliance for internal review
- **Quarterly:** Review the Workforce Management leaderboard for productivity + burnout trends
- **As needed:** Use the Voice Chatbot to run AI agents + ask operational questions

PROFESSIONAL TIER — $599

Part 5: Professional Tier — Reference Guide

5.1 Additional API Endpoints (vs Starter)

METHOD	ENDPOINT	DESCRIPTION
GET	`/api/ai/agents`	List 10 AI agents (via FastAPI proxy)
POST	`/api/ai/agents/{id}/run`	Run an AI agent
POST	`/api/ai/entities/extract`	Medical entity extraction (SNOMED/ICD-10/CPT/RxNorm)
POST	`/api/ai/hallucination/detect`	Hallucination + conflict detection
POST	`/api/ai/copilot/summarize`	AI Ops Copilot predictive summary
POST	`/api/chat`	LLM chat (z-ai-web-dev-sdk)
POST	`/api/chat/asr`	Speech-to-text
POST	`/api/chat/tts`	Text-to-speech
POST	`/api/chat/agent`	Trigger agent run from chatbot
POST	`/api/streaming/transcribe-chunk`	Real-time ASR for live dictation
GET	`/api/medflow/controls`	16 live compliance controls
POST	`/api/medflow/audit-pack`	Generate audit evidence bundle
GET	`/api/medflow/stripe`	Stripe billing data
GET/POST	`/api/medflow/workflow-rules`	Workflow rule CRUD
GET	`/api/medflow/wfm`	Workforce management data
GET	`/api/medflow/client-portal`	Client portal config
GET	`/api/medflow/mobile-config`	Mobile app config
GET	`/api/medflow/smart-apps`	SMART on FHIR app catalog
GET/POST	`/api/medflow/sra`	HIPAA SRA questionnaire + scoring

5.2 FastAPI Backend Endpoints

METHOD	ENDPOINT	DESCRIPTION
GET	`/api/health`	Service health check
GET	`/api/agents`	10 AI agents
POST	`/api/agents/{id}/run`	Run agent (simulated)
GET	`/api/db/connectors`	5 DB connectors
POST	`/api/db/connectors/test`	Test DB connection
GET	`/api/fhir/{job_id}`	FHIR R4 DocumentReference
GET	`/api/hl7/{job_id}`	HL7 v2.5 MDM^T02
GET/POST	`/api/fhir/subscription`	FHIR subscriptions
POST	`/api/direct/send`	DirectTrust messaging
POST	`/api/entities/extract`	Entity extraction
POST	`/api/hallucination/detect`	Hallucination detection
POST	`/api/copilot/summarize`	Copilot summary

5.3 RBAC (Professional — 12 roles)

Professional adds 6 more roles vs Starter: Onsite Coordinator, Offshore Delivery Manager, Auditor/Compliance Officer, Support User, plus full permissions for all existing roles across the 19 sections.

> **3-Tier Data Resilience**

Professional sections use 3-tier fallback: (1) Live FastAPI fetch via gateway/proxy, (2) Server-embedded data via AiDataBootstrap (SSR), (3) Static fallback hardcoded in JS bundle. Sections never show "Failed to load".

PROFESSIONAL TIER — $599

Part 6: Professional Tier — Infrastructure & Installation

Professional tier requires the FastAPI backend (port 8000) in addition to the Next.js frontend. Supports SQLite or PostgreSQL. Includes Docker Compose for full-stack local development.

6.1 Additional Prerequisites (vs Starter)

TOOL	REQUIRED?	PURPOSE
Python 3.12+	YES	FastAPI backend (AI agents)
pip	YES	Python package installer
Docker (optional)	OPTIONAL	Full-stack via docker-compose (Postgres + Redis + MinIO + FastAPI)

6.2 Starting the FastAPI Backend

1. Install Python dependencies:

```
cd mini-services/ai-agents-service
pip install -r requirements.txt
```

2. Start the FastAPI server:

```
python3 -m uvicorn main:app --host 0.0.0.0 --port 8000 --reload
# Swagger UI at http://localhost:8000/docs
```

6.3 Docker Compose (Full Stack)

```
docker-compose up -d
# Starts: PostgreSQL (5432), Redis (6379), MinIO (9000/9001), FastAPI (8000)
# Then run: bun run db:push + bun run prisma/seed.ts + bun run dev
```

6.4 Environment Variables (Professional — additional)

VARIABLE	REQUIRED?	EXAMPLE
FASTAPI_URL	YES	`http://localhost:8000`
OPENAI_API_KEY	OPTIONAL	For real AI (Professional uses simulated agents by default)
STRIPE_SECRET_KEY	OPTIONAL	For real billing (Professional shows mock Stripe data)
ZAI_API_KEY	OPTIONAL	z-ai-web-dev-sdk (pre-configured in sandbox)
S3_ENDPOINT	OPTIONAL	Object storage for audio files

ENTERPRISE TIER — $1,499

Part 7: Enterprise Tier — Business Process Guide

Enterprise adds full autonomy, AI-driven security, and advanced compliance. 25 sections + all Professional features PLUS Auto-Pilot, Autonomous SOC, AI Model Health, AI Explainability, Patient Portal, Zero Trust, SIEM, Voice Ops.

7.1 Additional Sections (vs Professional — 6 new)

#	NEW SECTION	BUSINESS PURPOSE
20	Auto-Pilot	Master switch for autonomous pipeline — 6-stage flow + exception queue (~15% human review)
21	Autonomous SOC	AI-driven security — auto-detect + auto-respond to threats (142ms vs 4hr human)
22	AI Model Health	Drift detection + auto-retraining pipeline — AI improves itself
23	AI Explainability	Every AI decision auditable — contributing factors, alternatives, EU AI Act compliant
24	Patient Portal	HIPAA-compliant patient access — documents, consent, DSR, secure messaging, FHIR export
25	Voice Ops	"Hey MedFlow" voice-activated operations — hands-free platform control

7.2 Auto-Pilot Workflow

When Auto-Pilot is ON, the entire pipeline runs autonomously:

1. **Intake → Transcription → Structuring → QA → Allocation → Delivery** — all run without human clicks
2. AI auto-classifies each job: green (auto-approve + deliver), amber (route to editor, skip QA), red (human review)
3. Only ~15% of jobs appear in the Exception Queue for human review
4. Self-Optimizing Routing learns from outcomes weekly — auto-adjusts editor weights

7.3 Autonomous SOC Process

- AI monitors for: bulk downloads, impossible travel, privilege escalation, brute force, off-hours access
- Auto-responds: session revoke, IP block, access restrict, MFA challenge, quarantine
- Response playbooks: 4 pre-configured (bulk download, impossible travel, privilege escalation, brute force)
- Mean time to respond: 142ms (vs 4 hours for a human SOC)
- False positive rate: 3.2%

7.4 Enterprise Daily Workflow

- **Morning:** Review Auto-Pilot exception queue (only ~15% of jobs need human review). Check Autonomous SOC threat feed.
- **Weekly:** Review AI Model Health for drift + retraining status. Check AI Explainability for decision audit trail.
- **Monthly:** Generate compliance audit pack. Review Patient Portal DSR requests. Test Voice Ops commands.
- **Quarterly:** Complete HIPAA SRA (12-question questionnaire). Review Zero Trust posture + SIEM coverage.

ENTERPRISE TIER — $1,499

Part 8: Enterprise Tier — Reference + Infrastructure

8.1 Additional API Endpoints (vs Professional)

METHOD	ENDPOINT	DESCRIPTION
GET/POST	`/api/medflow/autopilot`	Auto-pilot toggle + exception queue
GET	`/api/medflow/autonomous-soc`	Threat feed + response playbooks
GET	`/api/medflow/model-health`	Model drift + retraining pipeline
GET	`/api/medflow/explainability`	AI decision explanations
GET	`/api/medflow/auto-remediation`	Auto-fix compliance log
GET	`/api/medflow/routing-optimization`	Self-optimizing routing metrics
GET	`/api/medflow/zero-trust`	Zero trust posture telemetry
GET	`/api/medflow/siem`	SIEM connection + alert feed
GET	`/api/medflow/patient-portal`	Patient documents + consent + DSR
POST	`/api/medflow/voice-ops`	Natural language command parser

8.2 Enterprise Infrastructure

Enterprise tier supports the same installation as Professional, PLUS:

- **PostgreSQL** recommended (not SQLite) for production multi-user workloads
- **Object storage** (S3/MinIO) for audio file storage at scale
- **Redis** for background job queues (BullMQ) — future use
- **Multi-region deployment** — Vercel (frontend) + Render/Railway (FastAPI) + managed Postgres
- **Compliance PDF** included (34-page HIPAA/GDPR/EU MDR spec)

8.3 Enterprise Environment Variables (additional)

VARIABLE	REQUIRED?	PURPOSE
DATABASE_URL	YES	PostgreSQL recommended (`postgresql://...`)
ENCRYPTION_KEY	YES	Field-level encryption (AES-256-GCM)
SENTRY_DSN	OPTIONAL	Error tracking + monitoring
S3_*	RECOMMENDED	Object storage for audio + documents

> **Enterprise Compliance**
> Includes 34-page compliance specification PDF covering HIPAA, GDPR, EU MDR, ISO 13485/27001, HITRUST, SOC 2. Use the built-in HIPAA SRA tool (12-question questionnaire) for annual risk analysis.

RESELLER TIER — $4,999

Part 10: Reseller Tier — Business Process Guide

The Reseller tier includes EVERYTHING — all 29 sections, full FastAPI backend, all AI agents, voice chatbot + voice ops + live dictation, full autonomy (auto-pilot, SOC, model health, explainability, self-remediation, self-optimizing routing), full compliance (16 controls + audit pack + auto-remediation + HIPAA SRA + zero trust + SIEM), patient portal, client portal, mobile app, SMART on FHIR, Stripe billing, AND both PDFs (compliance spec + monetization strategy).

10.1 Full Section List (29 sections)

GROUP	SECTIONS
Workspace	Overview, Jobs (Kanban), My Queue, Upload Dictation, Live Dictation, Documents, Clarifications
Operations	AI Ops Copilot, Auto-Pilot, Workflow & Routing, Workforce Mgmt, Quality, Templates, Analytics, AI Agents, AI Model Health, AI Explainability
Configuration	Continuous Compliance, Integrations, SMART on FHIR, Patient Portal, Client Portal, Mobile App, Team, Billing
Administration	Autonomous SOC, Audit & Security, HIPAA SRA, Settings

10.2 Reseller-Specific Features

- **Full white-label rights** — rebrand + resell to clients
- **Monetization Strategy PDF** (13 pages) — 7 revenue streams, 3 SaaS tiers, 11-region pricing
- **Compliance Specification PDF** (34 pages) — HIPAA, GDPR, EU MDR, ISO 13485/27001, HITRUST, SOC 2
- **GITHUB_WORKFLOW.md** — git + release + tier packaging guide
- **All documentation** — README, LICENSE, CHANGELOG, ARCHITECTURE, DEPLOYMENT, API_REFERENCE, CUSTOMIZATION, GITHUB_WORKFLOW
- **Lifetime updates** — free updates for life
- **2 custom feature requests** included

10.3 Reseller Business Model

As a Reseller, you can:

- Rebrand MedFlow as your own product + sell on Gumroad/Payhip/your website
- Set your own pricing + keep 100% of revenue
- Offer hosted SaaS (recurring revenue) to non-technical buyers
- Offer done-for-you installation services
- Create tiered pricing (Starter/Professional/Enterprise/Reseller) using the tier-manifest system
- Must include attribution: "Based on MedFlow Transcribe AI boilerplate"

RESELLER TIER — $4,999

Part 11-12: Reseller — Reference + Infrastructure

The Reseller tier includes ALL API endpoints, ALL configuration options, ALL deployment methods, and ALL documentation. Reference the Professional + Enterprise guides for the full API list — Reseller includes everything.

11.1 Additional Reseller Assets

ASSET	LOCATION	DESCRIPTION
Compliance Spec PDF	`assets/MedFlow_Compliance_Specification.pdf`	34 pages — HIPAA/GDPR/EU MDR/ISO
Monetization Strategy PDF	`assets/MedFlow_Monetization_Strategy.pdf`	13 pages — 7 revenue streams, pricing
Monetization Strategy HTML	`assets/MedFlow_Monetization_Strategy.html`	Editable HTML source
GitHub Workflow	`docs/GITHUB_WORKFLOW.md`	Git + release + tier packaging
Full LICENSE	`LICENSE.md`	4-tier license with reseller rights

11.2 Reseller Deployment Options

METHOD	BEST FOR	EFFORT
Vercel + Render	Quick deploy (frontend + backend)	30 min
Docker Compose	Full-stack local/on-prem	15 min
AWS ECS	Enterprise production	2-4 hours
On-prem (air-gapped)	Sovereign/health-system	4-8 hours
Fly.io / Railway	Simple container deploy	20 min

> **Reseller Attribution Requirement**
> Resellers must include "Based on MedFlow Transcribe AI boilerplate" in their product documentation. Cannot claim to be the original creator. Cannot resell under the name "MedFlow Transcribe AI" — must rebrand.

Part 13: Terminology & Acronyms Handbook

A comprehensive reference for all terms, acronyms, and concepts used across all 4 tiers of MedFlow Transcribe AI.

13.1 Healthcare & Clinical Terms

TERM	EXPANSION	DEFINITION
PHI	Protected Health Information	Individually identifiable health information protected under HIPAA
MRN	Medical Record Number	Unique patient identifier within a healthcare facility
NPI	National Provider Identifier	10-digit unique identification number for healthcare providers (US)
SOAP	Subjective, Objective, Assessment, Plan	Standard clinical documentation format for progress notes
H&P	History and Physical	Comprehensive admission document with HPI, past history, ROS, physical exam
CDS	Clinical Decision Support	AI/electronic systems that provide clinicians with knowledge + patient-specific information
EHR	Electronic Health Record	Digital version of a patient's paper chart (Epic, Cerner, Allscripts)
BAA	Business Associate Agreement	Contract between a covered entity and a business associate handling PHI
DSR	Data Subject Rights / Data Subject Request	GDPR rights: access, rectification, erasure, portability, restriction, objection
DPIA	Data Protection Impact Assessment	GDPR Article 35 — risk assessment for high-risk processing
SRA	Security Risk Analysis	HIPAA annual requirement — OCR's #1 audit finding
ePHI	Electronic Protected Health Information	PHI in electronic form — subject to HIPAA Security Rule
TAT	Turnaround Time	Time from job submission to document delivery
SLA	Service Level Agreement	Contractual commitment to delivery time (STAT=4h, Urgent=12h, Routine=24h)
BCMA	Barcode Medication Administration	System verifying the "5 rights" of medication at point of administration
PDMP	Prescription Drug Monitoring Program	State-level database tracking controlled substance prescriptions
EPCS	Electronic Prescribing of Controlled Substances	DEA-compliant electronic prescribing for controlled substances
RPM	Remote Patient Monitoring	Remote collection of patient health data via connected devices
SDOH	Social Determinants of Health	Non-medical factors influencing health (food, housing, transport)

13.2 Regulatory & Compliance Terms

TERM	EXPANSION	DEFINITION
HIPAA	Health Insurance Portability and Accountability Act	US law governing PHI privacy + security (45 CFR 160 + 164)
HITECH	Health Information Technology for Economic and Clinical Health Act	Strengthened HIPAA enforcement + breach notification
GDPR	General Data Protection Regulation	EU regulation on data protection (Reg. 2016/679)
EU MDR	European Medical Device Regulation	EU regulation for medical devices (Reg. 2017/745)
EU IVDR	European In Vitro Diagnostic Regulation	EU regulation for in vitro diagnostics (Reg. 2017/746)
EHDS	European Health Data Space	EU regulation for health data sharing (Reg. 2025/327)
NIS2	Network and Information Security Directive 2	EU cybersecurity directive (Dir. 2022/2555)
PIPEDA	Personal Information Protection and Electronic Documents Act	Canadian data protection law
PHIPA	Personal Health Information Protection Act	Ontario health privacy law
21 CFR Part 11	FDA Electronic Records + Signatures	US regulation for electronic signatures in FDA-regulated industries
SaMD	Software as a Medical Device	Software intended for medical purposes without being part of a hardware device
ISO 13485	Medical Device Quality Management System	International standard for medical device QMS
ISO 27001	Information Security Management System	International standard for information security
ISO 14971	Risk Management for Medical Devices	International standard for clinical risk management
HITRUST CSF	HITRUST Common Security Framework	Certifiable security + privacy framework for healthcare
SOC 2	Service Organization Control 2	AICPA audit report on security, availability, confidentiality
NIST 800-63B	Digital Identity Guidelines	US standard for authentication assurance levels (AAL1/AAL2/AAL3)

TERM	EXPANSION	DEFINITION
NIST 800-207	Zero Trust Architecture	US standard for zero trust security model
UEBA	User + Entity Behavior Analytics	ML-based insider threat detection
WORM	Write Once Read Many	Immutable storage for audit logs

13.3 Interoperability Standards

TERM	EXPANSION	DEFINITION
FHIR	Fast Healthcare Interoperability Resources	HL7 standard for RESTful healthcare data exchange (R4/R5)
HL7 v2	Health Level 7 Version 2	Pipe-delimited messaging standard (ADT, ORM, ORU, MDM)
DICOM	Digital Imaging and Communications in Medicine	Standard for medical imaging storage + transmission
SNOMED CT	Systematized Nomenclature of Medicine Clinical Terms	Comprehensive clinical terminology system
LOINC	Logical Observation Identifiers Names and Codes	Universal code system for lab + clinical observations
ICD-10/11	International Classification of Diseases	WHO diagnostic coding system
RxNorm	—	NLM standardized nomenclature for clinical drugs
CPT	Current Procedural Terminology	AMA medical procedure code set for billing
SMART on FHIR	Substitutable Medical Apps, Reusable Technologies	OAuth 2.0-based app launch framework for FHIR
DirectTrust	—	Secure email-based health information exchange (S/MIME)
Carequality	—	National health data sharing network (US)
CommonWell	—	Nationwide health data exchange network (US)
TEFCA	Trusted Exchange Framework and Common Agreement	ONC's national health information network framework
IHE	Integrating the Healthcare Enterprise	Profiles for standards-based health data exchange (XDS, XCA, MHD)
CCDA	Consolidated Clinical Document Architecture	HL7 standard for clinical document structure
X12	ASC X12	EDI standard for healthcare claims, eligibility, prior auth

13.4 AI & Technology Terms

TERM	EXPANSION	DEFINITION
LLM	Large Language Model	AI model for text generation + understanding (e.g., GPT-4, GLM-4)
ASR	Automatic Speech Recognition	AI speech-to-text conversion (e.g., Whisper)
TTS	Text-to-Speech	AI voice synthesis from text
VLM	Vision Language Model	AI model for image understanding + description
NLP	Natural Language Processing	AI for understanding human language (negation, temporal, entity extraction)
CAC	Computer-Assisted Coding	AI-assisted ICD-10/CPT code suggestion with encoder validation
CDI	Clinical Documentation Integrity	Process for ensuring clinical documentation accuracy + completeness
DLP	Data Loss Prevention	Policies + tools to prevent PHI exfiltration (email, USB, clipboard)
PAM	Privileged Access Management	Just-in-time elevation for admin access, no standing admin
SBOM	Software Bill of Materials	Inventory of software components + dependencies for vulnerability tracking
HSM	Hardware Security Module	FIPS 140-2 Level 3 physical device for cryptographic key management
SIEM	Security Information and Event Management	Centralized logging + threat detection (Splunk, Sentinel)
SOC	Security Operations Center	24/7 security monitoring + incident response team
RBAC	Role-Based Access Control	Access permissions based on user role
ABAC	Attribute-Based Access Control	Access permissions based on attributes (specialty, shift, client)
SSO	Single Sign-On	One login for multiple systems (SAML 2.0, OAuth 2.0, OIDC)
MFA	Multi-Factor Authentication	Two+ authentication factors (password + TOTP + WebAuthn)
DRG	Diagnosis-Related Group	Classification system for hospital billing (groups ICD codes)
QMS	Quality Management System	ISO 13485-compliant document control + design controls
DHF/DMR/DHR	Design History File / Device Master Record / Device History Record	ISO 13485 + 21 CFR 820 required documentation for medical devices

13.5 BPO & Operations Terms

TERM	EXPANSION	DEFINITION
BPO	Business Process Outsourcing	Contracting non-primary business functions to a third party

TERM	EXPANSION	DEFINITION
TSO	Transcription Service Organization	Company providing medical transcription services
WFM	Workforce Management	Shift scheduling, productivity tracking, skills management
FinOps	Financial Operations / Cloud Financial Operations	Cloud cost optimization + financial accountability
CAPA	Corrective and Preventive Action	Quality management process for addressing non-conformances
PMS/PMCF	Post-Market Surveillance / Post-Market Clinical Follow-up	EU MDR requirements for monitoring device performance post-launch
PSUR	Periodic Safety Update Report	EU MDR annual safety report
CSV	Computer System Validation	GAMP 5 risk-based validation (IQ/OQ/PQ)
LACE+	Length of stay, Acuity, Comorbidity, Emergency	Readmission risk prediction score
NEWS2/MEWS	National Early Warning Score / Modified Early Warning Score	Clinical deterioration scoring systems
